

Your feeds. Our checks.

Trestl receives Hospital Indemnity, Accident, and Critical Illness claims the way you already move them, runs the checks configured for each plan before payment, and returns findings to your analysts or your adjudication system. Your team keeps every payment decision.

What is the Trestl Exchange?

The data plane between your systems and Trestl.

- A **per-client** set of connectors for data in and results out, isolated by tenant.
- **Inbound**: claims, member and enrollment files, groups, plan configuration, accident reports, and clinical documents.
- **Outbound**: claim results in CSV or JSON, delivered to the destination you choose.
- **Manual or scheduled** polling and delivery, set per connector.
- Every run and file **recorded**, from detection through validation to archive.

What can you do with it?

One integration, several ways to work.

- Run **prepayment review** on your regular claim batches.
- Send a **historical file** for a scoped diagnostic review of paid claims.
- Run in **shadow mode** beside your current process before any payment changes.
- Return findings to **adjudication**, or review them in the **Trestl workspace**.
- Load **plan configuration** so checks follow your benefit schedules and limits.

How do you get started?

Each step is its own decision.

- 1 **Discovery**: products in scope, the claim population, and who owns data and payment decisions.
- 2 **A synthetic sample** file and data dictionary, before any real data moves.
- 3 **An interface agreement**: route, file contract, schedule, and control totals.
- 4 **Partner testing** against agreed acceptance cases.
- 5 **Your operating mode**: historical, shadow, or active review.

Tenant-isolated · Encrypted in transit and at rest · US-hosted · Hash-chained audit trail · BAA available

Supported routes and formats are confirmed for each environment in the interface agreement and partner testing. Findings are presented for review; the carrier or its authorized administrator retains claim and payment authority. © 2026 Trestl Health Solutions, LLC.
